NOT_FOUND

Ask AI about this page

Last updated February 9, 2026

The `NOT_FOUND` error occurs when a requested resource could not be found. This might happen if the resource has been moved, deleted, or if there is a typo in the URL.

404 NOT_FOUND: Not Found

Troubleshoot

AI Assistance

Copy prompt

To troubleshoot this error, follow these steps:

1. **Check the deployment URL**: Ensure that the deployment URL you are using is correct and does not contain any typos or incorrect paths
2. **Check deployment existence:** Verify that the **deployment exists** and has not been deleted
3. **Review deployment logs:** If the deployment exists, review the **deployment logs** to identify any issues that might have caused the deployment to be unavailable
4. **Verify permissions:** Ensure you have the necessary **permissions** to access the deployment

5. **Contact support:** If you've checked the above and are still unable to resolve the issue, **contact support** for further assistance
